

(a) arrival order: every key a far jump

...and each XOR step waits on the previous one

banding 46.1 ns/key · 5.75 misses/key

(b) window order: same keys, grouped first

one window $\approx$ 768 KiB – fits in L2;
processed one at a time, left to right

banding 15.2 ns/key · 0.17 misses/key
