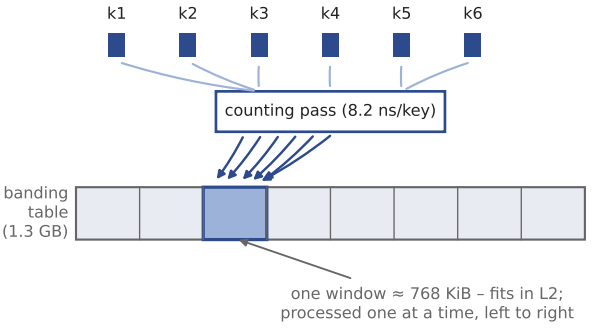
(a) arrival order: every key a far jump
k1
k2
k3
k4
k5
k6
banding table (1.3 GB)
...and each XOR step waits on the previous one
banding 84.8 ns/key



(b) window order: same keys, grouped first
k1
k2
k3
k4
k5
k6
counting pass (8.2 ns/key)
banding table (1.3 GB)
one window ≈ 768 KiB – fits in L2;
processed one at a time, left to right
banding 23.3 ns/key
